# SECTION 1—WASP SETUP

## SECTION 1.1—WASP

An instructional video outlining the Wilson Audio Setup Procedure (WASP) can be found here: [www.wilsonaudio.com/wasp](http://www.wilsonaudio.com/wasp). The proper positioning of your new Sasha V within your room is critical in order to extract its formidable performance envelope. When carefully followed, the WASP has proven to be the most effective method for setting up Wilson Audio loudspeakers. Your authorized Wilson Audio Dealer is trained in this process, and is the best resource for you to ensure your loudspeakers are setup properly.

Viewing the video is the best way to learn how to properly employ WASP, but we have also included a simplified outline of it here.

### **Zone of Neutrality: Left and Right Channel**

The “Zone of Neutrality” is an area in your room where the speakers will sound most natural. This location is where the speakers interact the least with adjacent room boundaries. It is important to have a clear working space while determining the Zone of Neutrality.

The following is a simple method to locate the Zone of Neutrality within your listening environment:

1. Stand against the wall BEHIND the location where you intend to position your loudspeakers. Speaking in a moderately loud voice and at a constant volume, project your voice out into the room. Your voice will have an overly heavy, “chesty” quality because of your proximity to the rear wall.
2. While speaking, slowly move out into the room, progressing in a direction parallel to the sidewall. It is helpful to have another listener seated in the listening position

WASP VIDEO

to assist you during this process. Listen to how your voice “frees up” from the added bass energy imparted by the rear wall boundary. Also, notice that your voice is quite spatially diffuse (to your assistant, your voice will sound spatially large and difficult to localize) as you begin to ease away from the rear wall.

3. At some point during your progression forward into the room, you will observe a sonic transition in your voice; it will sound more tonally correct and less spatially diffuse (your assistant can now precisely localize the exact origin of your voice). When you hear this transition, you have entered the inner edge of the Zone of Neutrality. Place a piece of tape on the floor to mark this location. Although it will vary from room to room, in most rooms the zone begins between two and a half to three feet from the rear wall.
4. Continue to walk slowly away from the rear wall. After some distance, usually one to two feet past the first piece of tape, you will begin to hear your voice lose focus and appear to reflect (echo) in front of you. This is caused by the return of the room’s boundary contribution; your voice is now more noticeably interacting with the opposite wall. At the point where you begin to hear the reflected sound of your voice, you have reached the outer edge of the Zone of Neutrality. Place a piece of tape on the floor and mark this location. The distance between the “inner” and “outer” edge tape marks is usually between eight inches (for small, interactive rooms) and three feet (for large, more neutral rooms).
5. Now position yourself against the side wall perpendicular to the intended speaker location. Stand between the two tape marks. Using the same procedure as above, begin moving into the room toward the opposite sidewall, progressing between the two pieces of tape. As above, listen for the point in the room where your voice transitions from bass-heavy and diffuse to neutral. Mark this point with tape. Continue your progression until there is an obvious and distracting interaction with the wall in front of you and mark this point with tape. The four pieces of tape now form a rectangle that establishes the Zone of Neutrality for the loudspeaker to be installed on that side of the room.

# 8 SASHA V INSTALLATION AND CARE GUIDE

*When carefully followed, the WASP has proven to be the most effective method for setting up Wilson Audio loudspeakers.*

6. Repeat this process for each speaker location individually. These are your Zones of Neutrality, one for each channel.

Theoretically, the Zone of Neutrality for any room runs like a path, parallel to the walls all around the room. Adjacent to very large windows and open doors, the outer edge of the Zone of Neutrality moves closer to the wall and becomes wider. If you were to extend the inner and outer boundaries of the Zone for the sidewalls and the front wall (behind the speakers), they would intersect.

### **Speaker Placement Versus Listening Position**

The location of your listening position is as important as the careful setup of your Wilson Audio loudspeakers. The listening position should ideally be no more than 1.1 to 1.25 times the distance between the tweeters on each speaker. Therefore, in a long, rectangular room of 12' x 18', if the speaker tweeters are going to be 9' apart, you should be sitting 9'11" to 11'3" from the speaker. This would be more than halfway down the long axis of the room.

Many people place the speakers on one end and sit at the other end of the room. This approach will not yield the finest sound. Carefully consider your listening position. Our experience has shown that any listening position that places your head closer than 14" from a wall, or exactly in the center of a room, will diminish the sonic results of your listening due to the deleterious effects of boundary interaction.

### **Speaker Orientation**

Speaker placement and orientation are two of the most important considerations in obtaining superior sound. The first thing you need to do is eliminate the sidewalls as a sonic influence in your system. Speakers placed too close to the sidewalls will suffer from a strong primary reflection. This can cause out-of-phase cancellations, or comb

# 10 SASHA V INSTALLATION AND CARE GUIDE

filtering, which will cancel some frequencies and change the tonal balance of the music. Adhering to the Wilson Audio Setup Procedure outlined in this section, and as shown in the instructional video we link to, is the best method with which to position your loudspeakers.

A very important aspect of speaker placement is how far from the back wall to place the speakers. The closer a loudspeaker is to the back wall, the more pronounced the low bass energy and centering of the image will be. However, this comes at a definite reduction in soundstage size and bloom, as well as a deterioration of upper bass quality. You must find the proper balance of these two factors, but remember, if you are partial to bass response or air and bloom, do not overcompensate your adjustments to maximize these effects. Overcompensated systems are sometimes pleasing in the short-term, but long-term satisfaction is always achieved through proper balance.

To make correct in-home setup of the Sasha V possible without test equipment, Wilson Audio has measured the correct geometric time domain alignment for different distance/ear height combinations. By measuring the distance from the speaker to your ear (measured on the floor from the bottom/front of the Woofer to directly below the ear canal) when seated in the listening position, as well as height of the listener's ear (the distance from the floor to the center of the ear canal), you will be able to align the system for your listening position. Learn more about this in Section 3.

## UPPER ARRAY

1. Remove screws as shown in image.

2. Remove and set aside crate lid.

3. Remove tool kit, spike kit, and manual from foam, then remove foam. Set all aside.

Spike kit, Tool kit  
and Manual

4. Remove upper modules, one at a time, and set aside. Use caution to prevent damage.

## WOOFER

1. Remove screws as shown in image.

2. Remove and set aside crate lid and foam pieces.

3. With help, lift crate up so that woofer is resting on casters. Use caution to prevent damage.

4. With help, roll woofer out of crate. Use caution to prevent damage.

# SECTION 2—UNCRATING SASHA V

**Note: You will have two Upper Array enclosures as well as two Woofer Module enclosures to unpack. The two modules for each of the channels will need to be separated into right and left channels. Clear out two spaces in your room, one for your left and one for your right channels. For channel matching, place the ODD numbered modules in the LEFT channel position and the EVEN numbered modules in the RIGHT channel position.**

## SECTION 2.1—UNCRATING SASHA V

**Note: Please remove any jewelry such as rings, watches, necklaces, and bracelets along with covering belt buckles and zippers during this process to avoid damaging the Sasha V's painted surface.**

### Initial Check

The Sasha V is shipped in three wooden crates (*see page 12 for visual guide*). Upon receiving these crates, please check their condition. If any of the crates are damaged, please report it to the shipping company immediately for insurance verification.

### The following items are recommended for this procedure:

- Electric Screwdriver
- Phillips Head Bit
- Suitable Tool to cut the band around crates

### Uncrating the Woofer Module

A minimum of two strong adults is required to setup the Sasha V. Locate the two largest crates labeled "Sasha V Lower." These contain the Woofer enclosures and are the first components of the system to unpack.

1. Cut the band wrapped around the crate. With the crate lid facing up, unscrew the wood screws securing the lid. Remove the lid.

2. Carefully lift the crate upright so that the Woofer Module is now vertical. With the Woofer Module's bottom toward the floor, reach in and gently roll the Woofer Module out of the crate, carefully, so as not to hit the Woofer Module on the crate and scratch the paint.
3. Place the Woofer Module with an odd serial number on the left side of the room and the Woofer Module with an even serial number on the right side of the room.

**Note: These two Woofer Modules are very heavy and care should be taken to prevent injury. Roll the Woofer Module with drivers facing forward for the best stability.**

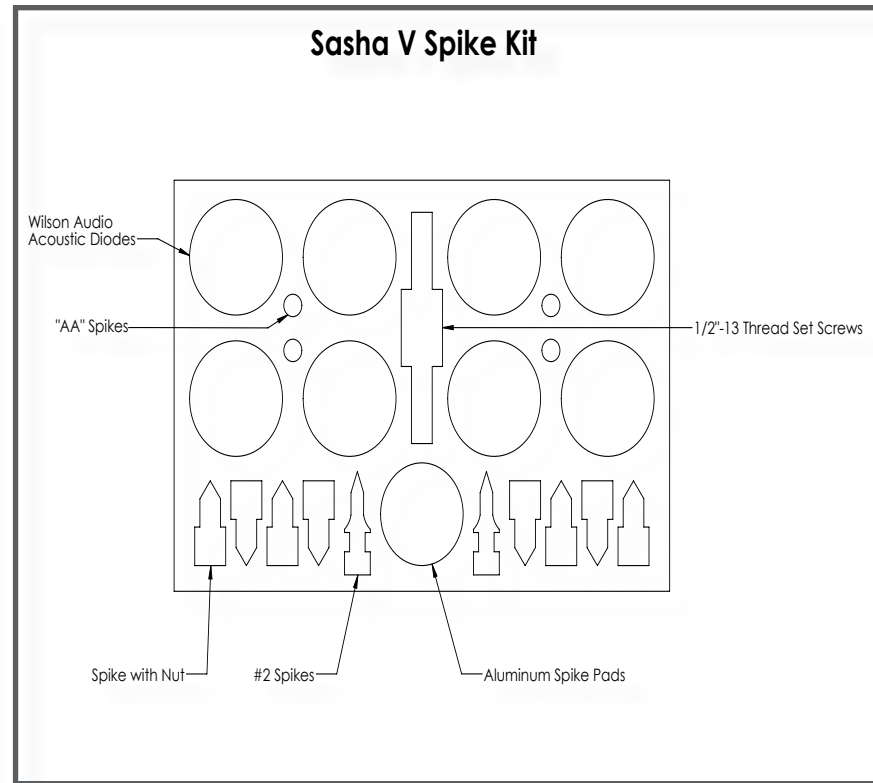

### Uncrating the Upper Array

The Upper Arrays are contained in a single crate labeled "Sasha V Uppers." Unpack the enclosures using the following procedure:

4. Cut the band wrapped around the crate. With the crate lid facing up, unscrew the wood screws securing the lid. Remove the lid.
5. The Upper Array crate contains this Installation and Care Guide, the Tool Kit, and the Spike Kit (*see page 16*). Remove these and all other documents found in the crate.
6. When removing the Upper Arrays, take care so as not to hit the modules on the crate and scratch the paint. Using the small shelf on the rear of the module, tilt the module so there is access to the bottom side. Slide the other hand under the Upper Array for support, and carefully lift the enclosure out of the crate.
7. The cloth grilles are attached to the enclosures. Detach the grilles from each enclosure and remove the protective plastic covering the grilles.

# 16 SASHA V INSTALLATION AND CARE GUIDE

**You will be using tools and parts in these kits throughout the installation process. Keep the Sasha V Tool Kit and Spike Kit at hand.**

8. Place the Upper Array with an odd serial number on the left side of the room and the Upper Array with an even serial number on the right side of the room with the drivers facing the wall (to protect the drivers while uncrating and the installation process).

**Note: After the system is setup, keep the shipping crates for future shipping needs.**

A detailed technical drawing of a mechanical assembly, likely a motor or actuator. The drawing is a top-down view showing various components, including a central shaft with a pulley, a motor housing, and a nameplate. The nameplate is a rectangular plate with rounded corners, featuring the name "SASHA" in a stylized, outlined font. Below the nameplate, the letters "VW" are also visible in a similar font. The drawing includes numerous lines representing the geometry of the parts, as well as dashed lines indicating hidden features. There are also some faint text labels like "Dew" and "Kool-Lee" scattered throughout the drawing.

SASHA

VW

# SECTION 3—ASSEMBLING SASHA V

**Note: Before setting up Sasha V, please carefully study Section 1 and/or watch the WASP video. They provide valuable information on determining the ideal room location for your speakers.**

## SECTION 3.1—INITIAL ASSEMBLY

### Preparation

You will need the following items:

- Supplied Tool & Spike Kits
- Tape Measure
- Time Alignment Charts (*see Section 6*)
- Known Listening Position
- Masking Tape & Pen

Take a moment to familiarize yourself with the hardware on the top of the Woofer Module. A complete set of Time Alignment Charts is located in Section 6.

### Upper Array Assembly

The Upper Array uses “AA” spikes on the front of the enclosure (*see graphic above*) and a built-in spike/receptical found at the bottom rear of the enclosure. In some installation positions, the Time Alignment Charts will indicate a need to thread the #2 spike into the spike receptical found at the bottom rear of the enclosure. The spikes rotate the Upper Array to a scribed position as a part of the Sasha V’s propagation delay adjustment and correction for your unique listening position. Shorter “AA” spikes are always installed in the front two positions (the threaded holes located near the bottom front of the

enclosure). The spike-type is stamped on the spike. The spikes should be screwed in all the way, until they are hand tight. Use the 7/16" Wrench to "snug" the spike to the enclosure. **Do not over tighten spikes.**

## SECTION 3.2—PROPAGATION DELAY ADJUSTMENT

### Listening Position

The Sasha V time alignment design and unique architecture accounts for different listening distances (away from the speakers) and listening ear heights (measured distances from the floor to your ear). For each distance/ear height combination there is a custom alignment geometry.

To make correct in-home setup of the Sasha V possible without test equipment, Wilson Audio has provided the correct geometric time domain alignment for different distance/ear height combinations. This information can be found in the Time Alignment Charts in Section 6. By measuring the distance from the speaker to your ear when seated in the listening position (measured on the floor from the bottom/front of the Woofer to directly below the ear canal), as well as the height of the listener's ear (distance from the floor to the center of the ear canal while comfortably sitting), you will be able to align the Sasha V so it is extremely accurate in the time domain for your personalized installation.

### Alignment Procedure

Locate the Time Alignment Charts in Section 6. These tables contain critical information that will guide you to position the Upper Arrays for optimized propagation delay accuracy. The rear of the Upper Array assembly rests on a specific step on the Alignment Block. The Time Alignment Charts also contain information on the front-to-back alignment of the Upper Array. The position of the Upper Array is

facilitated by the Alignment Block Steps (rotation) as well as the front-to-back location of the Upper Array—determined by one of two positions for the front spikes. The front spike position is designated by the engraved numbers in the front spike tracks.

The table in Section 6 also contains information on the appropriate length spike to be used in the rear of the Upper Array. There are two rear spike configurations. These two possible configurations are determined by the distance/ear relationship of the installation. The two rear spike configurations are: no spike, or a #2 spike.

Determine the alignment of the Upper Array as follows. Repeat each step of this procedure on the left and right channels simultaneously.

1. Refer to the Time Alignment Charts from Section 6 in this manual and place them close by for easy reference.
2. Make sure that you are in your intended listening position.
3. While sitting comfortably, have someone measure your ear height from the floor directly below your ear canal. You should be relaxed in your chair, as you would be when listening to music.
4. Now measure the distance from the point on the floor directly below your ear to the center point between the spikes on the front bottom of the Woofer Module baffle (*see image on page 24*).
5. Refer to the Time Alignment Charts (*see Section 6*) and locate the corresponding ear height and listening distance for each chart. There are two charts. The first: “*Sasha V Upper Spike Length*” determines whether or not there is a spike installed into the rear of the module. The second table:

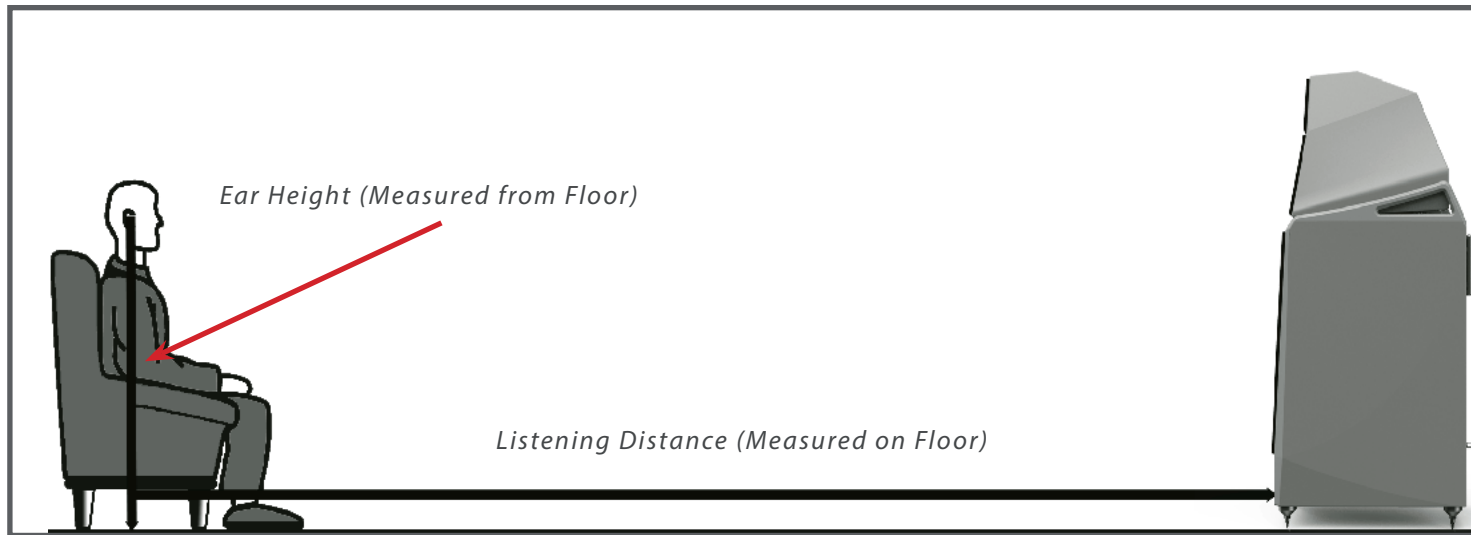

*“Sasha V Upper Alignment Block Step”* determining where the rear spike on the bottom of the Upper module will rest.

6. Make a mark on the chart labeled *“Sasha V Upper Spike Length”* indicating the proper rear spike for the Upper Array.
7. Make a mark on the chart labeled *“Sasha V Upper Alignment Block Step”* indicating which step the rear spike on the Upper Array will rest.
8. The front spike track has two locations. Refer to the charts in Section 6 to determine whether to rest the Upper Array front spikes in position 1 or 2. Make sure the front spikes are pushed to the front of whichever spike detent is used when finished installing.
9. **Note: The shortest spikes (labeled “AA”) are always used at the front of the Upper Array.**

## SECTION 3.3—MOUNTING THE UPPER ARRAY

### Install the Upper Array as Follows

1. Install the front pair of short (“AA” length) spikes into the bottom of each Upper Array. Use the 7/16” Wrench to “snug” the spikes to the enclosure. **Do not over tighten spikes.**
2. Refer to the table labeled *“Sasha V Upper Spike Length”* and install the appropriate rear spike, if necessary. Use the 7/16” Wrench to “snug” the spike to the enclosure. **Do not over tighten spikes.**

3. Refer to the table labeled "Sasha V Upper Alignment Block Step". With the front spikes pointing down, **carefully** lower the Upper Array between the Woofer blades and set the spikes down on the correct front spike detent.
4. Move the Alignment Block to the proper front-to-back setting for the Upper Array's rear spike to rest on the correct step. Once the block is in its final position, lock it down by twisting the locking bolt (no tools needed). Rest the rear spike on the Alignment Block step indicated in the chart.

**NOTE: Take caution not to scratch the painted surface with the alignment spikes as you install the Upper Array. The front bevel on the Woofer Module is particularly vulnerable.**

## SECTION 3.5—UMBILICAL CONNECTIONS

The correct connection of the two umbilicals to the Upper Array is as follows:

1. Locate the binding post labeled “MID FREQUENCY.”
2. Locate the cable directly below this binding post. This cable exits the top of the Woofer Module just below the appropriate connector. Connect the RED lug of the cable to the RED (positive) terminal labeled “MID FREQUENCY.” Connect the BLACK lug of the cable to the BLACK (negative) terminal. Tighten binding post nut with the 1/2” Driver found in the Tool Kit. **Do not over tighten.**
3. Locate the cable directly below the binding post labeled “HIGH FREQUENCY.” Repeat step #2. **Do not over tighten.**
4. Once the cables are connected correctly to the binding posts make sure to tighten the cable clamp hardware at the base of the cable to ensure the enclosure is sealed.
5. Using the form found on page 11, identify the best sounding location in your listening room before installing the spikes under your Woofers.

**Note: Please ensure that you do not invert the polarity of the umbilicals or connect the cables to the wrong binding posts on the Sasha V. Connecting the wrong cables to the wrong binding posts will void the warranty and potentially damage the drivers.**

**Note: Hand-tighten cable clamps when finished connecting cables**

# SECTION 4—FINAL SETUP

## SECTION 4.1—SPIKING SASHA V

**Your Dealer is trained in the art and science of the Wilson Audio Setup Procedure (WASP) outlined in Section 1. Before the spike/diode assemblies are attached to the bottom of Sasha V, the setup and fine tuning of your loudspeaker should be completed. Before moving the Sasha V to install spikes, use masking tape to carefully mark the floor around the bottom of the Woofer module to use as a reference after the spikes are installed.**

### Wilson Audio Acoustic Diode “Spike” Assembly

- Gather the threaded spikes and install the nut to about one thread from the unthreaded spike tip. This will allow for greater movement when leveling the loudspeaker later.
- Screw the spike/nut combo into the diode housing until the nut is against the diode.

**Note: Do not tighten the nut against the diode yet. You will need to unscrew them when you level the Sasha V later.**

- Place the set screw into the other end of the diode with the Allen head toward the spike. This will ensure that, if for any reason you have to remove your Sasha V spikes, you will be able to withdraw the set screw safely using the supplied Allen wrench. Screw the set screw into the diode until it stops turning.
- Place the Acoustic Diode assemblies out of the traffic pattern until they are needed during the installation.

WILSON AUDIO ACOUSTIC DIODE

### Materials Required

- 8 Assembled Wilson Audio Acoustic Diodes
- Swivel Caster Wrench
- Masking Tape

**Note: Be very careful not to cross-thread the spikes. The base of the Sasha V is made of X-Material and can be cross-threaded if spikes are installed at an angle.**

**Note: This is a two person job. Do not attempt this by yourself. The Sasha V is heavy and may seriously injure someone if tipped over. An assistant should stand to the rear of the Sasha V to steady it.**

### Installation Procedure

1. Take care to mark the exact location of the Sasha Vs with masking tape to ensure the speakers can be returned to their exact setup position.
2. If leaning the Sasha V to the side safely is not an option, or an assistant is unavailable to help stabilize the system for this step, remove the Upper Array from the Woofer Module. Lay a furniture pad or soft blanket adjacent to the Woofer Module to protect the paint. Carefully lay the Woofer Module on its side.
3. Using the caster wrench, remove the casters.
4. Insert the Acoustic Diode assemblies into the four holes located on the bottom of each Woofer Module. Tighten until the top surface of the Acoustic Diode touches the bottom surface of the X-Material plate on the bottom of the Woofer Enclosure. **Hand tighten only!**

5. Taking care to observe the location of the Woofer Module relative to the masking tape used during the WASP documentation, return the Sasha V Woofer Module to the precise location marked on the ground in an upright position.
6. If previously removed, re-install the Upper Array atop the Woofer Module.

## SECTION 4.2—LEVELING SASHA V

1. Sasha V comes equipped with a built-in bubble level found on the top of the Woofer Module. Look at that bubble level and determine if the Sasha V is level or which side of the enclosure is lower than the rest making the enclosure uneven.
2. To find out which spike is lowest, grasp the Sasha V enclosure and **gently** rock it back and forth. This will identify the spike that is out of level from the other three.
3. Adjust the Acoustic Diodes spike/nuts shorter and/or longer until the bubble shows the speaker is level.
4. When finished leveling, you may rotate the spike tips in place by using the supplied 7/16" wrench and tightening the nut with 3/4" wrench. **Note: When finished leveling all the nuts should be "snug" to get the best performance from the Acoustic Diodes. Do not over-tighten.**
5. Repeat process on the other loudspeaker.

## SECTION 4.3—REMOVING THE PROTECTIVE FILM

To protect the finish of the Sasha V during final manufacture, shipment, and setup in your listening room, we have applied a removable layer of protective film over the paint finish. We recommend that this film be left in place until the speakers are ready to be assembled at their final location in your listening room. Once you have determined their final position, remove the film by following this procedure:

1. Ensure the speaker surface is room temperature before removing the protective film.

**Note: Removing the protective film when the speaker surface is cold can damage the paint surface.**

2. Slowly remove the film from the top down, large sections at a time, gently pulling the film downward and outward.

**Note: Tearing the film quickly and aggressively can damage the paint.**

3. Take care while removing the protective film near edges and corners to prevent paint damage in these areas.
4. The protective film should not be left on the painted surface for extended periods of time, nor exposed to heat sources and/or direct sunlight.

## SECTION 4.4—RESISTORS

By removing the glass cover on the upper bevel on the rear of the Woofer enclosure of your Sasha V, you may gain access to the resistor panel. These resistors serve several functions. These specialized resistors not only serve as a type of fuse to protect the Sasha V drivers, they are also used as tools for tuning the system.

**Note: Only Wilson Audio replacement resistors should be used in your Sasha V. Changing the value or brand of resistor will have a potentially negative effect on the sonic performance of your loudspeakers and can void your Warranty.**

### Midrange and Tweeter Resistors

The midrange resistors equal 1.6 ohms (2 X 3.2Ω in parallel). The tweeter resistors equal 2.40 ohms (2 X 4.80Ω in parallel). Resistors provide precise level matching for the midrange and tweeter drivers correspondingly. The resistors also act as ultra-high-quality fuses which open before a driver can be damaged by excess power (i.e. power surges, blackouts, clipping, etc.).

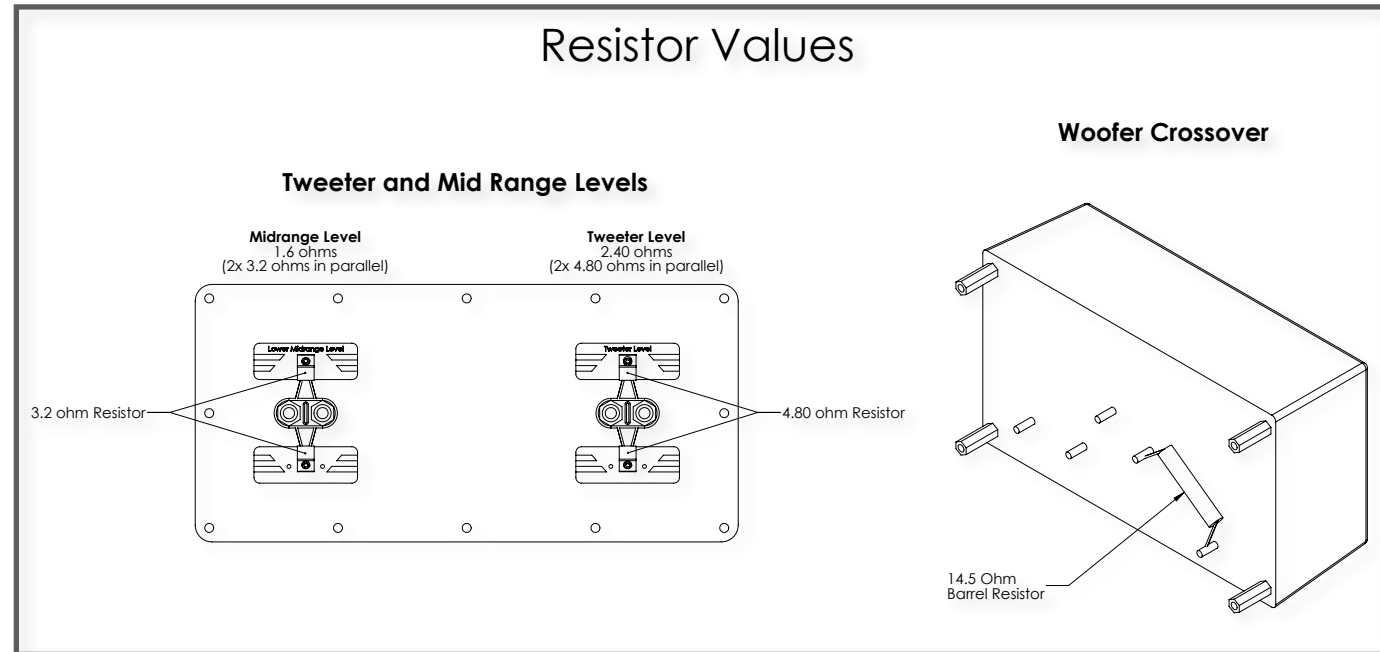

### Woofers Damping Resistor

There is a single 14.5 ohms barrel resistor for the Woofer level. This resistor is preinstalled in the base of the Woofer enclosure and should not be changed by the end user.

### Resistor Fine Tuning

In rare instances, it may be desirable to alter the levels of the tweeter or midrange to overcome some room related tonal balance issues. Please contact your Authorized Wilson Audio Dealer for help and more information on how to proceed.

**Note: These specialized resistors can be ordered from your Authorized Wilson Audio Dealer or on the Wilson Audio Online Store. Only use Wilson Audio replacement resistors in your Sasha V.**

**Note: If you notice the sonic qualities of your system degraded or worsen, you may have resistors that are damaged. These resistors don't always "open up" like fuses and can continue to pass a signal when damaged. This is most commonly attributed to sudden surges in the system from blackouts, clipping, or "pops" associated with disconnecting cables without muting the amps. Please replace the resistors as soon as possible to bring the performance and life back into your system.**

# SECTION 5—SPECIFICATIONS

## SECTION 5.1—SPECIFICATIONS:

**Enclosure Type Woofer:** Rear Ported

**Enclosure Type Midrange:** Rear Vented

**Enclosure Type Tweeter:** Sealed

**Woofers:** Two—8 inches (20.32 cm) *Paper Pulp*

**Midrange:** One—7 inches (17.78 cm) *Paper Pulp Composite*

**Tweeter:** One—1 inch (2.54 cm) *Doped Silk Fabric*

**Sensitivity:** 88 dB @ 1 Watt @ 1 meter @ 1 kHz

**Nominal Impedance:** 4 ohms / minimum 2.36 ohms @ 82 Hz

**Minimum Amplifier Power:** 20 Watts per channel

**Frequency Response:** 20 Hz – 32 kHz +/- 3 dB *Room Average Response [RAR]*

**Overall Dimensions:** Height—45  $\frac{1}{16}$  inches (114.48 cm) *w/o spikes*

Width—14  $\frac{1}{2}$  inches (36.83 cm)

Depth—23  $\frac{15}{16}$  inches (60.78 cm)

**System Weight Per Channel:** 245 lb (111.13 kg)

**Approximate Shipping Weight:** 760 lb (344.73 kg)

# SECTION 7—WARRANTY

## SECTION 7—WARRANTY DETAILS

### Limited Warranty

Subject to the conditions set forth herein, Wilson Audio warrants its electronics to be free of manufacturing defects in material and workmanship for the Warranty Period. The Warranty Period is a period of 90 days from the date of purchase by the original purchaser, or if both of the following two requirements are met, the Warranty Period is a period of five (5) years from the date of purchase by the original purchaser:

**Requirement No. 1. No later than 30 days after product delivery to the customer, the customer must have returned the Warranty Registration Form to Wilson Audio. Alternatively, the warranty may be filled out on Wilson Audio's website.**

**Requirement No. 2. The product must have been professionally installed by the Wilson Audio Dealer that sold the product to the customer.**

**FAILURE TO COMPLY WITH EITHER REQUIREMENT NO. 1 OR REQUIREMENT NO. 2 WILL RESULT IN THE WARRANTY PERIOD BEING LIMITED TO A PERIOD OF 90 DAYS ONLY.**

### Conditions

This Limited Warranty is also subject to the following conditions and limitations. The Limited Warranty is void and inapplicable if the product has been used or handled other than in accordance with the instructions in the owner's manual, or has been abused or misused, damaged by accident or neglect or in being transported, or if the product has been tampered with or service or repair of the product has been attempted or performed by anyone other than Wilson Audio, an authorized Wilson Audio Dealer Technician or a service or repair center authorized by Wilson Audio to service or repair the product. Contact Wilson Audio at 1(801) 377-2233 for information on location of Wilson Audio Dealers and authorized service and repair centers. Most repairs can be made in the field. In instances where return to Wilson Audio's factory is required, the Dealer or customer must first obtain a return authorization. Purchaser must pay for shipping to Wilson Audio, and Wilson Audio will pay for shipping of its choice to return the product to purchaser. A RETURNED PRODUCT MUST BE ACCOMPANIED BY A WRITTEN DESCRIPTION OF THE DEFECT. Wilson Audio reserves the right to modify the design of any product without obligation to purchasers of previously manufactured products and to change the prices or specifications of any product without notice or obligation to any person.

### Remedy

In the event that the product fails to meet the above Limited Warranty and the conditions set forth herein have been met, the purchaser's sole remedy under this Limited Warranty shall be to: (1) contact an authorized Wilson Audio Dealer within the Warranty Period for service or repair of the product without charge for parts or labor, which service or repair, at the Dealer's option, shall take place either at the location where the product is installed or at the Dealer's place of business; or (2) if purchaser has timely sought service or repair and the product cannot be serviced or repaired by the Dealer, then purchaser may obtain a return authorization from Wilson Audio and at purchaser's expense return the product to Wilson Audio where the defect will be rectified without charge for parts or labor.

### Warranty Limited to Original Purchaser

This Limited Warranty is for the sole benefit of the original purchaser of the covered product and shall not be transferred to a subsequent purchaser of the product, unless the product is purchased by the subsequent purchaser from an authorized Wilson Audio Dealer who has certified the product in accordance with Wilson Audio standards and requirements and the certification has been accepted by Wilson Audio, in which event the Limited Warranty for the product so purchased and certified shall expire at the end of the original Warranty Period applicable to the product.

### Demonstration Equipment

Equipment, while used by an authorized Dealer for demonstration purposes, is warranted to be free of manufacturing defects in materials and workmanship for a period of five (5) years from the date of shipment to the Dealer. Demo equipment needing warranty service may be repaired on-site or, if necessary, correctly packed and returned to Wilson Audio by the Dealer at Dealer's sole expense. Wilson Audio will pay return freight of its choice. A returned product must be accompanied by a written description of the defect. Dealer owned demonstration equipment sold at retail within two (2) years of date of shipment to the Dealer is warranted to the first retail customer to be free of manufacturing defects in materials and workmanship for the same time periods as if the product had originally been bought for immediate resale to the retail customer. Wilson Audio products are warranted for a period of 90 days, unless extended to 5 years, as provided above, by return and filing of completed Warranty Registration at Wilson Audio within 30 days after product delivery to customer and the product was professionally installed by the Wilson Audio Dealer that sold the product to the customer.

### Miscellaneous

**ALL EXPRESS AND IMPLIED WARRANTIES NOT PROVIDED FOR HEREIN ARE HEREBY EXPRESSLY DISCLAIMED. ANY LEGALLY IMPOSED IMPLIED WARRANTIES RELATING TO THE PRODUCT SHALL BE LIMITED TO THE DURATION OF THIS LIMITED WARRANTY. THIS LIMITED WARRANTY DOES NOT EXTEND TO ANY INCIDENTAL OR CONSEQUENTIAL COSTS OR DAMAGES TO THE PURCHASER.**

**Some states do not allow limitations on how long an implied warranty lasts or an exclusion or limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you. This Limited Warranty gives you specific legal rights, and you may also have other rights, which vary from state to state.**
